

# Martindale Jiff-V Undercutter

Universal A.C.-D.C. Motor

Power switch in handle

### EASY TO GUIDE

Do not bear down on the Undercutter, merely guide it.

Its own weight exerts the proper pressure for free cutting and efficient motor speed.

Jiff-V Files cut a V-slot. Jiff-U Saws cut a U-slot and are available in the seven thicknesses mentioned at right.

Jiff-V File

Jiff-U Saw

While the Commutator Slotting Files shown on pages 20 and 23 have proved handy for undercutting where there is not enough work to justify the purchase of a motor-driven undercutter, the motor driven Jiff-V Undercutter cuts a similar V slot in a jiffy and eliminates much of the tedious work. The reciprocating action of this tool files a slot in much less time than it would take to do by hand and because the tool is held with two hands there is more control of the cutting action.

Also available for this undercutter are Jiff-U saws, which operate the same as the file except they make a U-shaped cut and are available in the following 7 thicknesses: .015", .020", .026", .030", .035", .040", and .043".

It is easy to guide the Jiff-V; it does rapid work and cuts clear up to the riser. It can be used on commutators of any size without removing the brush arms.

The Jiff-V Undercutter has proven especially adaptable to undercutting motors which must be kept running most of the time, such as is frequently the case with elevator motors.

The current design of the Jiff-U saws allows them to be 'chucked-up' in the end of the reciprocating shaft rather than in the file holder. The file holder, though not supplied with the undercutter, is available as an option to allow this tool to use either style of cutter.

### Catalog Number

Jiff-V Undercutter, less file holder, 115 V., 60 Hz.....	JFVUA
File Holder (required for use of files).....	JFVUD710
Jiff-V File .....	JIFI
Jiff-U Saw (specify thickness from below) .....	JISW
Saw Thicknesses: .015", .020", .026", .030", .035", .040", and .043"	
Net Weight 8 lbs., Shipping Weight 11 lbs.
